User Story Review Summary

Parameter	Description	Score (Out of 20)
Clarity	The user story is easy to understand; however, it lacks detailed acceptance criteria that clearly define expected outcomes.	16
Completeness	Core functionality is described, but preconditions and supporting details are not explicitly specified.	14
Business Value Alignment	Demonstrates strong alignment with healthcare objectives, patient safety, and regulatory compliance requirements.	19
Testability	The workflow can be validated through prescription management and automation test scenarios.	17
Technical Feasibility	Implementation is feasible with appropriate Electronic Health Record (EHR) system integration and supporting infrastructure.	18

Overall Score
84 / 100

Key Areas for Improvement

1. Define explicit acceptance criteria for prescription error handling and exception scenarios.
2. Specify validation rules for dosage limits, drug interactions, and duplicate medication detection.
3. Identify system actors and roles involved in the prescription review and approval process.
4. Document clear preconditions required before the prescription can be reviewed or approved.
5. Establish measurable acceptance criteria for digital prescription approval and authorization workflows.
