The screenshot displays the Burp Suite interface with the 'Detect Secret - GitHub Token (BLOCK)' rule selected in the left-hand 'COLLECTIONS' pane. The main window shows the 'Query Params' table, which is currently empty. Below this, the 'Body' tab is active, displaying a JSON response from the target application. The response indicates a successful detection of a GitHub token, with a status of 'success', an action of 'ALLOW', and a list of findings. The findings include a 'secret' value, a 'triggered' status of 'false', and an 'action' of 'ALLOW'. The response also includes a 'timestamp' of '2026-07-19T08:37:19.767Z'.

The screenshot displays the AI Shield Moderation API interface. On the left, a sidebar lists various collections of detectors, including Phase 5 - PII Detector, Phase 6 - CII Detector, Phase 7 - Secret Detector, Phase 8 - Toxic Content Detector, Phase 9 - Prompt Injection Detector, Phase 10 - File Validator, and Phase 11 - Token Size Validator. The 'Detect Secret - Clean Text (ALLOW)' detector is selected.

The main panel shows the configuration for the 'Detect Secret - Clean Text (ALLOW)' detector. It includes a 'POST' method, a URL '(/api/detect/secret)', and a 'Send' button. Below this, a table lists the parameters for the detector:

Key	Value	Description	Bulk Edit
Key	Value	Description	

The 'Body' tab is active, showing a JSON response from the API. The response indicates a successful detection of a secret in the provided text.

```

1 {
2   "status": "success",
3   "action": "ALLOW",
4   "detectorResults": [
5     {
6       "detector": "secret",
7       "triggered": false,
8       "action": "ALLOW",
9       "findings": []
10    }
11  ],
12  "sanitizedContent": "This is a normal request with no secrets",
13  "originalContent": "This is a normal request with no secrets",
14  "metadata": {
15    "tokenLimit": 10,
16    "processingTime": 0,
17    "timestamp": "2026-07-19T08:37:32.825Z"
18  }
19 }

```

On the right side, there is a 'New Chat' section with a 'Start using Agent Model' button and a note about the AI credits plan. Below this, there are sections for 'Debug 422 on secret detector', 'Stabilize PII parser errors', and 'Run a cross-detector consistency check'.

The screenshot displays the Jaxxresha's Workspace interface, which is a REST client and API testing tool. The interface is divided into several sections:

- Left Sidebar (Project Tree):** Shows a hierarchical view of the project structure. The 'COLLECTIONS' section is expanded, listing various API endpoints and their methods. The 'Moderate - Missing TextFile (400)' endpoint is selected.
- Main Workspace (REST Client Editor):** Displays the details of the selected endpoint. The method is 'POST' and the URL is '({baseUrl})/api/moderate'. The 'Body' tab is active, showing a JSON payload:

```
{
  "status": "error",
  "message": "text or file is required"
}
```

 The 'Headers' tab is also visible, showing a 'Content-Type' header set to 'application/json'. The 'Test Results' tab shows a '400 Bad Request' response.
- Right Panel (New Chat):** Contains a 'New Chat' section with a 'Start using Agent Model' button. Below this, there is a 'Describe what you need. Press @ for context, / for skills.' section, followed by an 'Auto' button.
